# Directly in Your Company

Versatility of our customized solutions, our constant and direct collaboration make your work simple like never before

We are active in several market segments and we supply a wide range of **E2E** products and solutions

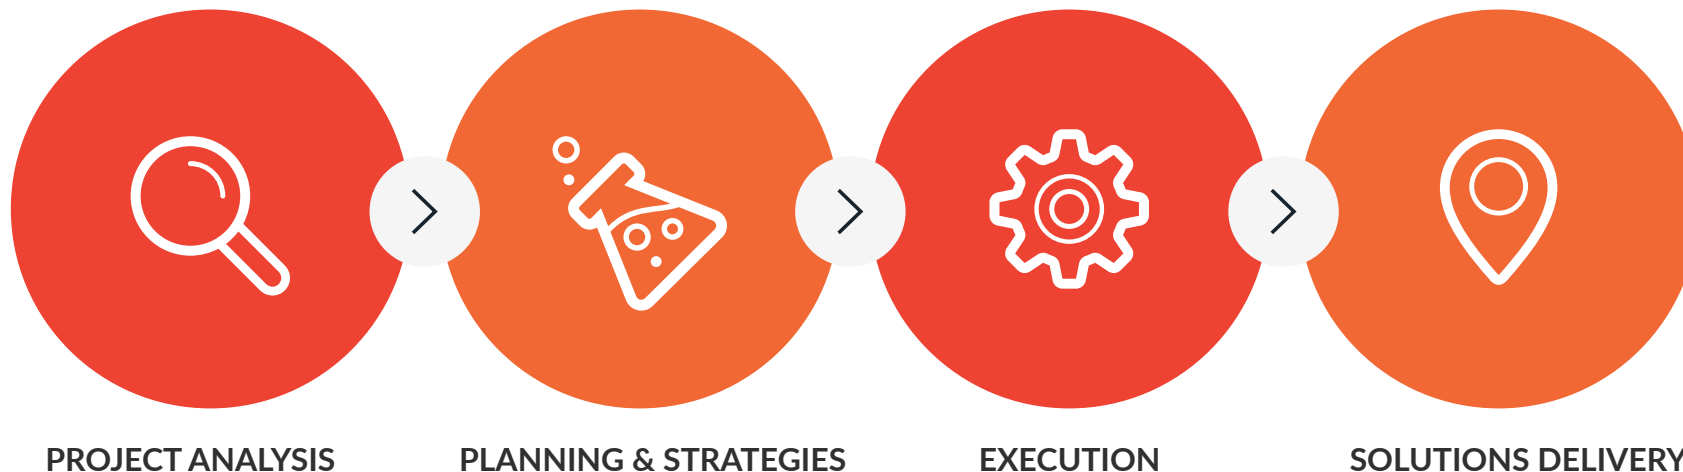

# How We Work

Understand customer needs and define the problem boundary is the first step to settle the right solution: **DEFINING THE SCOPE**

Once the client's problem is clear, a **MARKET RESEARCH** is carried out to find products and technologies that can meet the customers' concerns more efficiently and cost-effectively

**ANALYSIS & PLANNING:** is the next step to define the solution to be integrated

**STRATEGY & SOLUTIONS:** our team of highly specialized engineers, works closely with the manufacturers of the proposed solutions, to ensure that the final product is a best fit and the most competitive and effective one

# Our **WIRELESS SOLUTIONS**

Radio-frequency transmissions are now common for plenty of applications, from mobile phones to local Wi-Fi networks, to Rf identification. All these applications will exhaust the spectrum. Therefore, it becomes necessary to identify new transmission methods & protocols to allow them to coexist without any interference

Our Engineers, experienced in Radio Frequency Distribution Systems, have a broad experience and knowledge about advanced public security communication, systems integration, industrial broadband and **WIRELESS BROADBAND APPLICATIONS**

Each action is strictly connected to the next one to define and to deliver the best solution!

# Our INFORMATION TECHNOLOGY Solutions

arimas deals with design and implementation of last generation information systems.

Applied solutions are developed using the most modern “**MODELING & ANALYSIS**” methodologies.

According to latest **Software Engineering**’ standards, using advanced programming languages.

Thanks to the knowledge of our experts and our R&D division we are able to answer to any market needs; they are continuously engaged into research of innovative solutions
